

Feedback for Jee

- Body typeface is hard to read. Use sans serif to contrast with title typeface
- Have a menu (hamburger or something else)
- For “career”, have a button to go to the next section and/or navigation on top so you don’t have to go back to career when you want to go to the next section.
 - Navigation on the side/top: You could repeat the circle buttons on the side/top and have the buttons for the page you’re not currently on are greyed out until you hover.
- Try to find photo for “the beginning”, maybe of him and his right-hand woman or something
- Bigger top margins for the pages besides homepage
- Can try fixing images so they stay in the same spot even when you scroll. For multiple images, can try making something where you can click through the images. Not sure how these will look so just experiment!
